DESCRIPTION

LCp-200 Weight/Rate-By-Weight Controllers are high performance indicators with features and options focused on the requirements of process weighing applications with local setpoint control. They operate with all strain gage type load cells and interface easily with any PLC, DCS, or PC based supervisory control system. Engineering emphasis has been placed on simplicity, reliability, and expandability. Standard rate-by-weight operation and output provides precision mass flow control.

Eight relay outputs are available for local setpoint control, based upon set point values entered through the keypad, or downloaded serially from a host device. All relay

configuration and logic parameters are selectable through the front panel keypad. Communication of weight, setpoint values, system status, and diagnostic information is accomplished using standard protocols such as ASCII and Modbus RTU, or special serial interfaces like DeviceNet, Allen-Bradley Remote I/O, Modbus Plus, and Profibus.

The LCp-200 Safe-Weigh® Software System encompasses over 50 years of BLH Nobel application expertise. Plug-n-Weigh® quick calibration and setup procedures save time, money, and even field service calls. On-line diagnostics continuously monitor system performance and alert service personnel to potential problems before they happen.

SETPOINT CONTROL AND COMMUNICATION INTERFACES

Setpoint Availability

Precise setpoint control ensures accurate and repeatable batch process performance. Standard LCp-200 instruments have eight open collector DC setpoint output signals. Individual outputs can be configured for main (coarse) or dribble (fine) operation with in-flight and deadband (hysteresis) compensation for precision valve control. Polarity selection allows “open above” or “closed above” operation of each point. Tag names may be assigned for front panel or interface identification.

Optionally, eight solid state, triac type outputs can be ordered. Each triac output has the same configuration and parameter selections as the DC signals.

Communications and Interfacing

LCp-200 instruments are designed for fast, easy interfacing with virtually any PLC or DCS system. LCp-200 instruments are the first weight/rate system controllers with Schneider Modbus Plus licensing. As a charter member of the Allen-Bradley “Encompass” program, BLH Nobel offers Remote I/O capability in all LCp products. Profibus can be ordered for communication with Seimens controllers.

For network applications, units can be ordered with our Digi-System Plus protocol for communication with an LCp-400 Gate-Weigh controller.

Open collector setpoint outputs interface with PLC I/O cards and optional solid state triac relays control process valves directly
